

Remark

Applicant respectfully requests reconsideration of this application as amended. Claims 1, 4, 5, 9, 11, 12, 17, 20, 24, 27, 30, 33 and 36 have been amended. No claims have been cancelled. Therefore, claims 1-38 are present for examination.

35 U.S.C. §102 Rejection***White***

The Examiner has rejected claims 1-3, 7, 9-12, 33, 35, 36 and 38 under 35 U.S.C. 102(b) as being anticipated by White et al. U. S. Patent No. 4,602,365 ("White"). The present invention as recited in, for example, Claim 1, recites at least one significant difference from White.

Claim 1 recites that "the first token includes an all received up-to (aru) field to provide for ordering of the first plurality of messages by informing each of the members of the first group of the last message that other members of the first group have received." White does not suggest an aru field or providing for ordering of messages. White at Column 1, lines 60-64 discloses a method for "simultaneously operating a plurality of independent token passing data channels on a ring . . . for communicating along at least one of the channels." The communicating along the channels does not provide for any ordering of the data communicated. Applicant is unable to find any suggestion in White of providing for ordering of a plurality of messages.

For at least the reason stated above, Claim 1 is believed to be allowable over the references. Claims 9, 12, 17, 20, 24, 27, 33, and 36 contain one or more of the limitations discussed above, among others, and are therefore believed to be allowable. The remaining claims are dependent upon one of the above claims and are believed to be
